

Marketplace Metrics Improvement Analysis

Product Analytics Project by Artemie Turcanu
June 2025

What's Going Wrong?

Low repeat purchase rate and unclear revenue dynamics.

Diagnosing the Problem with Key Metrics

To find the cause of the retention drop, I analysed five key metrics:

1. sales
2. active users
3. new client acquisition
4. revenue per user
5. engagement

Sales are Growing – The Issue is Elsewhere

Monthly revenue and sales were stable and growing – no signs of decline.
Market acquisition looks healthy.

The Audience Size Metric Stays Stable

The trend of Monthly Active Users remained stable, indicating a consistent user base.

New Client Acquisition Remains Strong

Conversion to paying users remained high — onboarding and acquisition aren't the problem.

User Commitment Remains Consistent

ARPU shows minor fluctuations but overall steady user spending.

Retention Reveals the Root Cause

While other metrics stay stable, cohort analysis shows a sharp drop in user retention after the first purchase — indicating poor re-engagement.

Fixing Retention Drop

1. Fix order bug to reduce cancellations
2. Cut delivery delays to boost retention
3. Add payment method to ease checkout

Prioritising the Right Move

I used the ICE framework to prioritise impact

- $ICE = \text{Impact} \times \text{Confidence} \times \text{Ease}$
- Fixing the order processing bug showed the highest ICE score (240)
- It's the most impactful and feasible solution

Hypothesis	Impact (score)	Impact	Confidence	Ease	ICE
Fix order processing bug to prevent cancellations	974 orders	5	8	6	240
Reduce delivery delay to encourage repeat purchases	21 orders	2	10	4	80
Add new payment method to ease repeat purchases	282 orders	3	5	9	135

Key Recommendations

-  Increase delivered orders
-  Grow total revenue
-  Lower cancellation rate
-  Raise ARPU
-  Improve customer satisfaction
-  Boost repeat purchases

See how I diagnosed the problem, applied the ICE framework, and built actionable insights from real marketplace data.

Thank you for your attention
